

# Employee Reporting System Specification + AI Builder Prompt

1. Overview: Secure web system for employee daily reporting, admin monitoring, monthly exports, and AI summaries.
2. Core Features: login system, daily activity logs, private data per user, admin dashboard, Excel export, archive system, email reminders at 4pm, AI report generation.
3. User Roles: Employee (own reports only), Admin (full access). Positions are pre-assigned by admin using employee ID mapping, not user-selected.
4. Data Model: Users, EmployeeProfile, DailyReports, MonthlyExports, AuditLogs.
5. Workflow: admin creates accounts, employees log in, submit daily reports, system tracks submissions, monthly export, archival.
6. Reminder System: email sent at 4pm daily if no report submitted; otherwise no email.
7. AI Report Generation: system summarizes all daily logs into structured monthly reports per employee and admin.
8. Security: RBAC, password hashing, token/session auth, strict data isolation.
9. Tech Stack: Frontend React/Next.js, Backend Node.js (Express/NestJS), PostgreSQL, JWT auth, cron jobs, SMTP email service.
10. AI Builder Prompt: AI Builder Prompt: Build a secure web-based employee reporting system with the following: - Username + password authentication (no email login required) - Admin creates users with predefined employee ID, department, and position - Employees cannot edit role/position/department - Employees submit daily work activity logs - Each employee can only view their own data - Admin can view all employee reports - Monthly Excel export of reports - Data retention: archive for 2 months before deletion - Daily 4pm email reminders if report not submitted - AI generates monthly summaries from daily logs Security: - RBAC (Employee/Admin) - Password hashing - Secure session or JWT authentication - Strict data isolation System is web-only (no mobile app initially). Focus on simplicity, scalability, and enterprise-grade structure.
